Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Barry Lewin on 8/11/09.

Please amend claims as follows:

1. (Currently Amended) A railway beacon designed for laying along a railway line and comprising:

- a casing ~~(3)~~ supporting at least one electronic circuit ~~(4)~~, which receives an electromagnetic enabling signal from a vehicle travelling along the railway line, and generates a coded response signal, ~~such as a telegram~~, transmitted to the vehicle and containing information relative to travel of the vehicle; and

- a receiving antenna and a transmitting antenna ~~(42, 44)~~, both carried by said casing ~~(3)~~ and cooperating with said electronic circuit ~~(4)~~;

characterized in that said casing ~~(3)~~ is formed in one piece from insulating material; said casing ~~(3)~~ having at least one sunken seat ~~(12a)~~ housing at least one printed circuit ~~(38)~~ defining said electronic circuit ~~(4)~~; said sunken seat ~~(12a)~~ being filled

with solidified insulating resin ~~(40)~~ embedding said printed circuit ~~(38)~~ and the electronic components ~~(33)~~ on the printed circuit ~~(38)~~; and said insulating resin ~~(40)~~ containing no air, in particular no air bubbles, and comprising no water in its composition

wherein said receiving antenna and said transmitting antenna comprise a supporting structure defined by a number of elongated printed circuits communicating electrically with one another and forming a frame structure; each elongated printed circuit comprising first conducting tracks connected to respective first conducting tracks of other elongated printed circuits to form, as a whole, said receiving antenna; and each elongated printed circuit also comprising second-conducting tracks connected to respective second conducting tracks of the other elongated printed circuits to form, as a whole, said transmitting antenna.

2. (Currently Amended) A beacon as claimed in Claim 1, wherein said receiving antenna and said transmitting antenna ~~(42, 44)~~ are co-molded with said casing ~~(3)~~.

3. (Cancelled)

4. (Currently Amended) A beacon as claimed in Claim 1 [[3]], wherein adjacent said elongated printed circuits ~~(52)~~ are connected mechanically and electrically by L-shaped arcs ~~(54)~~ of conducting wire extending between adjacent end portions of said elongated printed circuits ~~(52)~~.

5. (Currently Amended) A beacon as claimed in Claim 1, wherein said casing is in the form of a parallelepiped-shaped plate.

6. (Currently Amended) A beacon as claimed in Claim 1, wherein said sunken seat (42a) is parallelepiped-shaped.

7. (Currently Amended) A beacon as claimed in Claim 1, wherein said sunken seat (42a) is closed by a flat plate (22) positioned with its peripheral edges (22a) resting along an annular edge (20) of the sunken seat to close said sunken seat (42a) in fluidtight manner.

Claims 8-12 (Cancelled)

Allowable Subject Matter

Claim(s) 1-2, 4-7 is/are are allowed.

The following is an examiner's statement of reasons for allowance: The prior art does not sufficiently teach or suggest the claimed limitations in their entirety in view of applicant's amendment and arguments, such as a railway beacon designed for laying along a railway line and comprising: a casing supporting at least one electronic circuit, which receives an electromagnetic enabling signal from a vehicle travelling along the railway line, and generates a coded response signal, such as a telegram, transmitted to the vehicle and containing information relative to travel of the vehicle; and a receiving

antenna and a transmitting antenna, both carried by said casing and cooperating with said electronic circuit; characterized in that said casing is formed in one piece from insulating material; said casing having at least one sunken seat housing at least one printed circuit defining said electronic circuit; said sunken seat being filled with solidified insulating resin embedding said printed circuit and the electronic components on the printed circuit; and said insulating resin containing no air, in particular no air bubbles, and comprising no water in its composition wherein said receiving antenna and said transmitting antenna comprise a supporting structure defined by a number of elongated printed circuits communicating electrically with one another and forming a frame structure; each elongated printed circuit comprising first conducting tracks connected to respective first conducting tracks of other elongated printed circuits to form, as a whole, said receiving antenna; and each elongated printed circuit also comprising second conducting tracks connected to respective second conducting tracks of the other elongated printed circuits to form, as a whole, said transmitting antenna.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
